Generation and initial analysis of more than 15,000 full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Clone distribution: MGC clone distribution information can be found through the I.M.A.G.E. Consortium/LINL at: http://image.llnl.gov Series: IRAK Plate: 11 Row: d Column: 4
This clone was Belected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 21703365
This clone has the following problem: The cds is short compared to the longest cds in the locus.

                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                           360
                                                                                                                                                                                                                                                                                                                                                                                                                                                 360
                 The invention relates to a human sphingosine kinase-like protein. The polypeptide can be expressed by standard recombinant methodology. The sphingosine kinase-like protein and gene can be used to regulate intracellular signalling and consequently cell proliferation and apoptosis. Such regulation is useful for treating cancer, allergies (e.g. sathmal, autoimmune diseases (e.g. rheumatoid arthritis) and central and peripheral nervous system disorders (e.g. Parkinson's disease). The present sequence represents the human sphingosine kinase-like protein
                                                                                                                                                                                                                       9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, sphingosine kinase, SphK; restenosis, ischaemia, gene therapy; antiesnes therapy; cancer; sphingolipid; signalling molecule, apoptosis; cytostatic, tumour necrosis actor-alpha; TNF, atherosclerosis; lymphoma; leukaemia, vasotropic; cell proliferative disorder; vascular disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to sphingosine kinase (SphK) polypeptides and nucleic acids encoding them. SphK is useful for treating a SphK-associated disorder especially cancers such as leukaemia, lymphoma, ovarian, breast, lung, colon, testicular, stomach and skin, atherosclerosis, restenosis or ischaemia and cell proliferative disease or disorder associated with vascular diseases. SphK gene is used in gene therapy and antisense-therapy. Sphingolipids serving as signalling molecules, have recently emerged as regulators of cell growth, diverse cell phenotypes and cell death. Activation of SphK by tumour necrosis factor (TNF) alpha inhibits apoptosis in human endothelial cells. The present sequence is human sphingosine kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An isolated Sphingosine kinase polypeptide useful for treating a SphK-
associated disorder especially cancer, restenosis or ischemia in a human.

20; Page 134; 586pp; English. Claim

The present invention describes NOVX proteins, where X can be 1 to 55

(e.g. NOV1). Also described: (1) a composition comprising a polypeptide
described above and a carrier; (2) a kit composition or more
containers, the composition described above; (3) an isolated nucleic acid
molecule which encodes a NOVX protein of the invention; (4) a vector
comprising the nucleic acid molecule described above; (5) a cell
comprising the above vector; (6) an antibody that immunospecifically
binds to the polypeptide described above; (7) methods for determining the
presence or amount of the above polypeptide or nucleic acid molecule in a
ammple; (8) methods for determining the presence of or predisposition to
a disease associated with altered levels of expression of the above
CC adaption an agent that binds to the polypeptide acid molecule in a
method of identifying an agent that binds to the polypeptide described
above; (10) a method for identifying a potential therapeutic agent for
use in treating a pathology that is related to an aberrant expression or
aberrant physiological interactions of the polypeptide; (11) a method of
cc a pathology associated with the polypeptide; (11) a method of
creening for a modulator of activity or of latency or predisposition to
c berrant physiological interactions of the polypeptide; (12) a method of
creening a pathology associated with the above polypeptide in a
mammal; and (14) a method for producing the above polypeptide in a
mannal; and (14) a method for producing the above polypeptide in a
mannal; and (14) a method for producing the above polypeptide in a
mannal; and (14) a method for producing the above polypeptide in a
mannal; and (14) a method for producing the above polypeptide in a
mannal; and (14) a method for producing the above polypeptide or prevent metabolic
conditions associated with a human disease. The polypeptide or the nucleic
acid molecule may be used to diagnose, treat or prevent metabolic
disorders such as diabetes or obesity, infections, cachexia, cancer
and and and and The present sequence encodes a human NOVX protein from dyslipidaemias. The nucleic acids can also be used as hybridisation medicine preventive probes, in chromosome mapping, tissue typing, present invention pharmacogenomics.

New human sphingosine kinase A, B and C polynucleotides and polypeptides useful in e.g. chromosome and gene mapping, and detecting inflammation or disease associated with abnormal levels of sphingosine kinase expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of an isolated polynucleotide encoding human sphingosine kinase C (SKC, see AAYS6059), an enzyme that phosphorylates sphingosine to form sphingosine 1-phosphate. The polynucleotide was isolated from an Hela cDNA library by PCR amplification. The invention provides polynucleotides (see AAA50508-10) and polypeptides (see AAY96057-25) for the human sphingosine kinase (SK) homologues SKX, SKB and SKC. The polynucleotides may be used as hybridization probes, in the construction of PCR primers for chromosome and gene mapping, in the recombinant production of SKA, SKB and SKC, and in the generation of antisense DNA or RNA. They can be used to detect inflammation or disease associated with abnormal levels of SK expression, or to detect
                                                                                                                                                                                                                                                                                                                  GGAGGAGTGGCAAGTCGTCTGTGGGAAGTTTCTGGCCATCAATGCCACAAACATGTCCTG

                                                                                                                                                                                                                                                                                                        The present sequence is the coding sequence for human sphingosine kinase of 59HKJ). The Kinase can be used for the diagnosis and treatment of sphingosine related disorders. The kinase can also be potentially used for controlling toxicity of platelet transfusion and as a platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a human sphingosine kinase-like protein. The polypeptide can be expressed by standard recombinant methodology. The sphingosine kinase-like protein and gene can be used to regulate intracellular signalling and consequently cell proliferation and apoptosis. Such regulation is useful for treating cancer, allergies (e.g. stehmacoid arthritis) and central and peripheral nervous system disorders (e.g. Parkinson's disease). The present sequence represents the human sphingosine kinase-like protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human sphingosine kinase-like protein; intracellular signalling; gene; cell proliferation; apoptosis; cancer; allergy; cytostatic; asthma; autoimmune disease; rheumatoid arthritis; Parkinson's disease; ss.

This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to buman tyrosine and serine/threonine protein kinases (FrK's and STK's), as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antiinflammatory activities. This polynucleotide sequence is a human kinase DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid molecule encoding a kinase polypeptide, useful for preparing a composition for treating diseases or disorders, e.g., cancer, or neurological, immunological or inflammatory disorders.

The present invention describes an isolated PRO nucleic acid (1). Also described: (1) a vector comprising (1); (2) a host cell comprising the vector of (1); (3) a process for producing a PRO polypeptides; (4) an isolated PRO polypeptide; (5) a chimeric molecule comprising the cisolated PRO polypeptide; (5) a chimeric molecule comprising the composition of matter comprising a polypeptide of (4); an agonist or antibody which specifically binds to a polypeptide of (4); an agonist or antibody which matter comprising a polypeptide of (4); an agonist or antipoptide in combination with a carrier; (8) an article of manufacture comprising a container, a label on the container and a composition of matter of (7); (9) a method of treating an immune related disease in a mammal; (10) a method for determining the presence of a PRO polypeptide in mammal; (12) a method of flaving the presence of a PRO polypeptide in mammal; (12) a method of identifying a compound that inhibits or minics the activity of or expression of a gene encoding a PRO polypeptide; and (13) a method of stimulating the immune response in a mammal; (22) a method of stimulating the immune response in a mammal. The processive, antipathatic, antidiabedic, antidiabe
                                                                                                                                                                                      human; PRO; immune related disease; inflammatory immune response; immune response stimulation; antiallergic; antianaemic; antiarthritic; antisathmatic; antidiabetic; antinflammatory; antipsoriatic; antirheumatic; antithyroid; CNS; dermatological; gastrointestinal; haemostatic; hepatotropic; immunostimulant; immunosuppressive; muscular; nephrotropic; neuroprotective; osteopathic; respiratory; vasotropic; virucide; gene therapy; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            useful in useful in diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New PRO polynucleotides and polypeptides, useful in useful in dia
and treating an immune related disease, e.g. systemic lupus
erythematosus, rheumatoid arthritis, diabetes mellitus or asthma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Williams
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Schoenfeld J,

human polypeptide. The protein encoded by the nucleic acid of the invention relates to the cDNA sequences encoding an isolated novel human polypeptide. The protein encoded by the nucleic acid of the invention is useful for treating central and peripheral nervous system diseases (e.g. peripheral neuropathy, Huntington's disease, amyotrophic clateral sclerosis); neurodegenerative diseases (e.g. parkinson's disease, amyotrophic clateral sclerosis); neurodegenerative disease (e.g. parkinson's disease, impeloid or lymphoid call disorders (e.g. systemic lupus) crychematosus, rheumatoid arthritis, insulin-dependent diabetes mellitus); wounds, ulcers, burns; bone disorders (e.g. systemic lupus); wounds, ulcers, burns; bone disorders (e.g. osteoporosis, osteoarthritis); mechanical and traumatic disorders (e.g. stroke, head trauma); lung or luver fibrosis; preperfusion injury in various tissues; bacterial, viral or fungal infections; allergic conditions such as allergic rhinitis, asthma; cosquiation disorders (e.g. septic shock, Crohn's cancer and tumours; and inflammatory diseases (e.g. septic shock, Crohn's disease, anaphylaxis). The protein may be used to inhibit the growth, crimiters in the function of infectious agents such as bacteria, fungi, viruses, or to effect bodily characteristics, biorhythms or circadian cycles of rhythms. The protein may also have completion, immune stimulating or sequence collycensing crecombinant protein for analysis. The present sequence represents a novel crecombinant protein for analysis. The present sequence is an expressing crecombinant protein for analysis. The present sequence is an expressed constitution.

Sequence 4432 BP; 970 A; 1122 C; 1282 G; 1058 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents cDNA encoding a human ceramide kinase designated hCERK1. The invention relates to hCERK1, nucleic acids encoding it, expression vectors and host cells containing hCERK1 nucleic acids, the recombinant production of hCERK1 and antibodies specific for hCERK1. The invention also encompasses methods of isolating hCERK1 from samples, the use of hCERK1 in drug screening, and the use of hCERK1 mucleic acid sequences in gene therapy. hCERK1 mediates the ATP-dependent behosphorylation of ceramids and can be used to screen for therapeutic and preventive agents for a mide range of disorders. Such disorders include neurological disease, inflammation, human immunodeficiency virus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                           The invention relates to isolated NOVX polypeptides and polymucleotides.

NOVX polypeptides and polymucleotides are used to prevent, diagnose or treat a medical condition in human related to the abbrrant expression and activity of NOVX polypeptides. For example, NOVX polypeptides and activity of NOVX polypeptides. For example, NOVX polypeptides and consumer to rectify mutations. Conversely, antisense NA molecules by production or to rectify mutations. Conversely, antisense NA molecules can be daministered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NOVX colymetoleotides and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar sequences in samples, and so which patients may be in need of similar sequences in samples, and so which patients may be in need of similar sequences in samples, and so which patients may be in need of the production of antibodies and in assays to identify modulators cancivative therapy. NOVX polypeptides may also be used as anti-NOVX polypeptides and antagonists and antagonists and propertide expression and activity of NOVX polypeptides antibodies, agonists and antagonist may also be used as diagnostic agents for detecting the presence of NOVX in samples. NOVX polypeptides and polynucleotide expression and activity of NOVX polypeptides and polynucleotide may be used in this way to prevent, diagnose and treat: metabolic disorders, diabetes, obesity, infectious disorders, immune disorders, chaematopoietic disorders, and the various dyslipidaemias, metabolic disorders, may, also he wasting disorders and the obsity, the metabolic syndrome X and conternant and the various dyslipidaemias, metabolic expenses and various cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ų,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            299
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    580

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed of the sequence tags for identifying expressed in diagnostics as expressed sequence tags for identifying expressed cativity of (II) auseful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II) (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in the protein protein and polymers of their traits to assess biodiversity and polymers.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GACCTCATCCTCATCCGGAAATGCTCCAGGTTCAATTTTCTGAGATTTCTCATCAGGCCC 961
                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel isolated polynucleotide and the encoded polypeptide. The molecules of the invention demonstrate antiniflammatory, heuropytotective, antianaemic, cytostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, haematopoletic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic DNA of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the MIPO web-site.
                                                                                                                                                                                                                                                                                                    541
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           841

The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, cardiovascular disease, disbabetes mellitus, hypertension, hypothyroidism, cholesterol ester strange.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    419

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain creation (PCR) primers, oligomers, and for chromosome and gene mapping, and diagnostics as expressed sequence tags for identifying expressed sequence tags for identifying expressed control in gene therapy techniques to restore normal activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving of (II). (II) and site shidhing partners are useful in medical imaging of supplement. (II) and site shidhing partners are useful in medical imaging of supplement. (II) and site shidhing partners are useful for treating disorders of sites expressing (II). (I) and (III) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in the protein expression or biological activity. The diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and anino acid sequences. Assetlysty-AASS4956 trapresent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in the printed specification, but was obtained in the printed specification, but was obtained in the printed specification, but was obtained in the printed specification, but was obtained in the printed specification, but was obtained in the printed specification of mutations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1054
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1114

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILE REFERENCE: File Reference: 7326-094

CURRENT FILING DATE: 1995-03-17

NUMBER OF SEQ ID NOS: 62517

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 14306

LENGTH: 2064
                                                                                                                                                                                                                                                                                                                              806 ratrccércaaardceaeaetredeacresáceáceácesceacearacarrecaagac

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 15155, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 15155
LENGTH: 1084
TYPE: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                GACTCTGTATGAGATTAACATAGACAAATACGACGACGCATCGTCTGTGTCGCCGGGGAGATGG

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: ABRUGINGSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: A ABRUGINGSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/074,788

Sequence 13, Application US/09817676A

Patent No. 6800470

GENERAL INFORMATION:
APPLICANT: Spiegel, Sarah
APPLICANT: Kohama, Takafumi
TITLE OF INVENTION: Expression and Methods of Use Thereof
FILE REFERENCE: 00170/HG
CURRENT PILING DATE: 2001-03-26
PRIOR APPLICATION NUMBER: US 60/194,318
PRIOR PILING DATE: 2000-04-03
NUMBER OF SEQ ID NOS: 15
SOFWARE: Patentin Ver. 2.0
SEQ ID NOS: 15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      961 cácrircacacrigggaaggargcriggccricgccacacacacacacariacgcgigagaegacacric 1020
